## 2. Citations and explanations (Rule 70.7)

The present invention discloses a mobile communication system including a base station having at least two antennas and at least two mobile stations having at least one antenna, respectively. The base station restores weight information and channel status information from feedback signals which are received from the mobile stations, determines downlink investigation information that results in maximum transmission channel capacity based on the restored weight information and channel status information, and selects mobile stations for simultaneous transmission based on the downlink investigation information.

Any prior art does not teach nor fairly suggest the method of this present invention. Therefore, Claims 1-27 have novelty, an inventive step and industrial applicability.
